Overview

An 800-watt power inverter converts DC power from a battery into AC power. It produces a smooth sine wave that looks like grid power. It can power laptops, LED TVs, Wi-Fi routers, fans, lights, and small tools. It also supports many energy-efficient appliances that stay under the 800-watt limit. There are some restrictions on what can be powered by this inverter, therefore it is crucial to know which devices can be used to avoid harming the inverter. But have you ever wondered what you can run off an 800W inverter?
