

Actual degree of outdoor solar power hub

Overview

For most of the continental United States, this means angles between 25-45 degrees. You can fine-tune this by subtracting 10-15 degrees for summer optimization or adding 10-15 degrees for winter optimization. A correctly tilted system can improve efficiency by 5-10% annually, reducing payback time and boosting long-term savings. In this guide, we'll break down. According to the US Department of Energy, solar panels perform best on south-facing roofs and tilted anywhere between 15 and 40 degrees. The ideal tilt angle is one that allows the sun's rays to strike the panel's surface perpendicularly.
