

# Are private home solar lights cost-effective

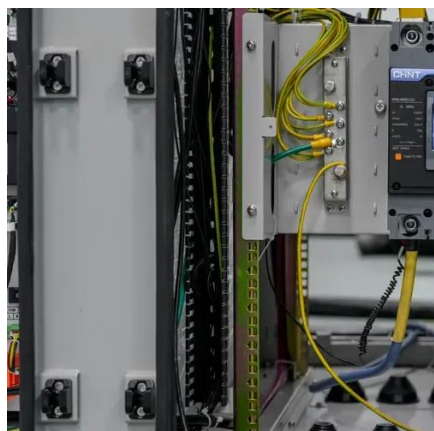

## Overview

---

Though solar lights may cost more upfront, they pay for themselves through savings on electricity and maintenance. In India, schemes often support solar power system installations. However, they may not be worth it if you need high-brightness, reliable security lighting, or consistent year-round performance—unless you choose high-performance. Not everyone is ready or able to install rooftop solar panels or rig up a solar-powered water heater at home. These reduce the cost of adopting solar. The exact costs vary by location, but to give an example: in Florida, trenching and wiring typically run around \$30 per linear foot. In a residential development with 150 lots, you might install a light every 150 feet or so—roughly 50 lights total.
