

# Can two 48v solar container lithium battery packs be connected in series

## Overview

---

Yes, you can mix different capacity lithium batteries, whether a normal 12V 100Ah battery or a Lithium server rack battery. To reach 48V, approximately 13 cells are connected in series (since 3.7V per cell). When. Can you connect two 48v battery packs in series?

I have an older 12kw inverter that operates on 96VDC/230VAC that powers our deep well pump and our water pressurization system. From what I've read it's recommended to keep the cable distance between the batteries to inverterschargers all the same, it even says so in the victron manual: "When wiring, make sure all inverterchargers have the same cable length. Also, the solar. In series, voltage adds up while capacity stays the same—like two 12-volt, 100 AH batteries making 24 volts, 100 AH. I've helped countless clients at Minghong Power tackle this choice.

### Lithium Series, Parallel and Series and Parallel

Connecting multiple lithium batteries into a string of batteries allows us to build a battery bank with the potential to operate at an increased voltage, or with increased capacity and runtime, or both.

### [Beginner question about connecting multiple batteries together in](#)

If you are using large section aluminium bars, then yes, the batteries can be evenly distributed along the bars, as can the inverter loads and pv chargers. Try to keep each pair of ...

## battery packs?

For example, you can first connect two 48V lithium battery packs in parallel to increase the capacity, and then connect two sets of these parallel - connected battery packs in series to increase the voltage.

## Can you connect two 48v battery packs in series?

You'd need to check with the manufacturer to see if you can do this. You may be limited by the voltage capabilities of the BMS they used. Some batteries can and some cannot, and you've ...

## [Lithium Solar Batteries Series vs Parallel Connection](#)

Is it better to use series or parallel connections for solar storage? It depends on your specific needs; use series for higher voltage requirements and parallel for increased capacity.
