

# China-Australia solar power trade

## Overview

---

There is huge potential for enhanced Australia-China collaboration in areas of mutual interest, including solar R&D (UNSW and JA Solar joint lab), green iron (Fortescue and China Baowu Steel), and battery recycling (Envirostream Australia and Hithium Energy). China is leading the charge in the global clean energy race, leaving Australia with a critical choice: engage or fall behind. This soaring demand, coupled with Australia's excellent solar irradiance, has made importing high-quality. China's energy landscape is undergoing a staggering transformation propelled by its leadership in cleantech innovation, declining costs in renewable energy technologies and a massive acceleration of its renewables build out, underpinned by central policy support that sees decarbonisation as a key. Australia and China can strengthen their ties with Southeast Asian nations through renewable energy initiatives and investments, which will aid the region's transition towards a green energy future while creating opportunities for partnership-building despite geopolitical tensions. Collaboration. The Australian Government plans to invest \$1 billion in domestic solar manufacturing to build resilience in a supply chain currently overconcentrated in China. This could alleviate energy security concerns but could also risk wasting public resources on an uncompetitive industrial play.

## China-Australia solar power trade

---

### [Should Australia make solar panels? Supply chain security through](#)

Global competition for clean energy industries is accelerating and Australia wants to join the race. The Australian Government plans to invest \$1 billion in domestic solar manufacturing to ...

### [Why overseas money is pouring into Australian green energy](#)

Chinese, French, Spanish and several big Asian companies have carved up the fast-growing large-scale solar farm development sector as they tap Australia's booming growth in ...

### [Australia and China can power up Southeast Asia's green energy](#)

Australia and China can strengthen their ties with Southeast Asian nations through renewable energy initiatives and investments, which will aid the region's transition towards a green ...

### [A Comprehensive Guide to Solar Powered Products from China to ...](#)

The market for solar powered products from China to Australia is robust and growing, driven by a combination of government support, high local energy prices, and increasing ...

### [Towards a Strategic Reset for Australia in the New Renewable Age ...](#)

China is leading the charge in the global clean energy race, leaving Australia with a critical choice: engage or fall behind. A strategic reset is needed to align Australia's climate ambitions ...

### [If Australia is serious about becoming a renewable energy superpower](#)

Australia must urgently reposition from a dig-and-ship economy to a zero-emissions trade and investment leader. But to do this, Australia needs to build strong, productive, global partnerships ...

### [I've seen the energy future and it's in China, and Australia must ditch](#)

In collaboration, Australia and China could produce any product using green energy - photovoltaics (PV) modules, polysilicon, lithium, iron and steel, ammonia, battery energy storage ...

### [Australia's relationship with China could](#)

## give energy storage boom

Australian research and development (R&D) in energy storage and other renewable energy technologies, such as solar PV, could be combined with the prowess of Chinese ...

## Australia's solar PV industry hinges on China's influence

The report examines manufacturing opportunities across Australia's solar PV supply chain, from polysilicon to wafers, cells and modules, and offers recommendations on how Australia can

## **China's pivot to renewables presents**

China's immense investments in renewable energy and cleantech, while speeding its domestic decarbonisation and accelerating the global energy shift, also present unparalleled ...
