

# Does a group of solar panels have different power

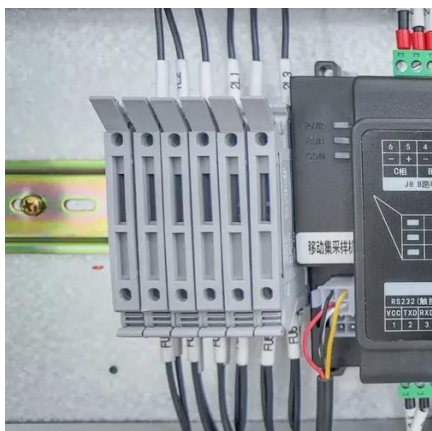

## Overview

---

If you've invested in solar panels, you might expect that identical panels will always produce the same amount of power. It's not uncommon for identical solar panels to generate different amounts of electricity, leaving many. A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy. This blog explores. Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat water for domestic uses, to warm buildings, or heat fluids to drive electricity-generating turbines. Measured in watts (W), this number directly affects the solar panel energy output and. Each solar panel is made up of smaller solar cells, which take advantage of the photovoltaic effect.
