

Does the energy storage power station have avc

Overview

The energy storage station participates in the regional AVC adjustment and adopts the secondary voltage coordinated control mode of reactive voltage. The AVC master station deploys in regional power grid, and AVC slave station installs in the energy storage power. AGC is an automated control technology designed to maintain the frequency stability of a power system. It works by continuously monitoring the grid's frequency and adjusting the active power output of generators in response to any deviations.
