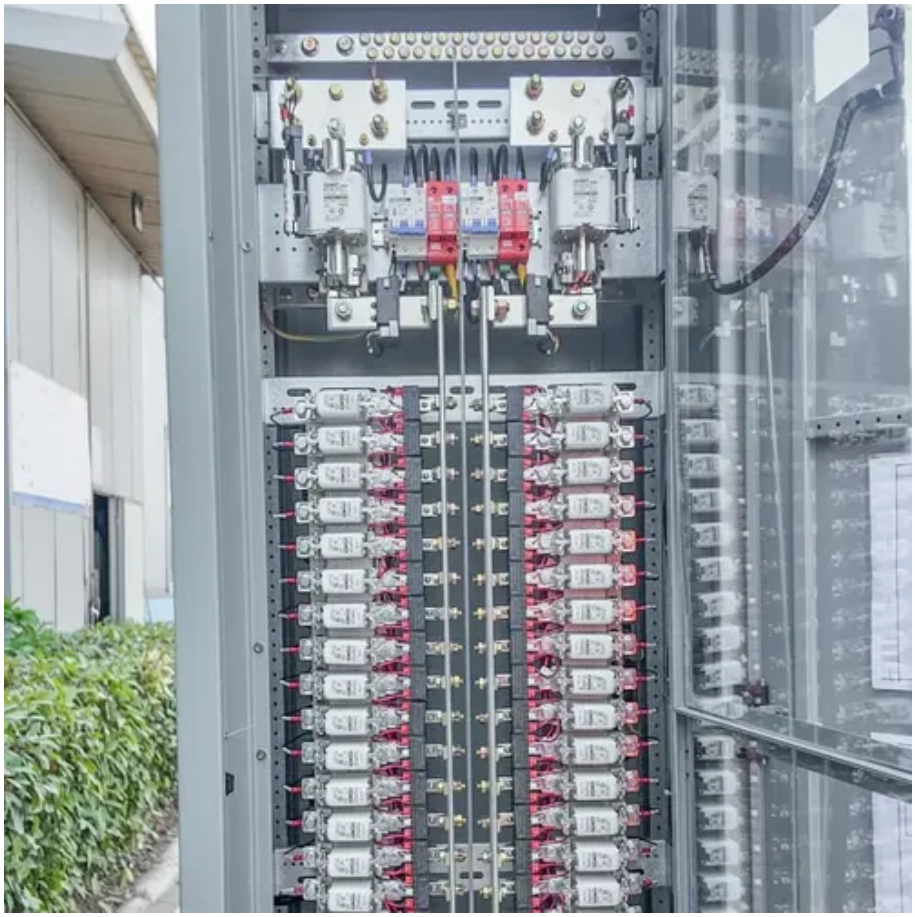
Energy Storage System Value Chain



Overview

McKinsey's Energy Storage Team can guide you through this transition with expertise and proprietary tools that span the full value chain of BESS (battery energy storage systems), LDES (long-duration energy storage), and TES (thermal energy storage). Jessica Liu, an engineer at MOKOEnergy with 6 years of work experience, majored in automation at Hubei University of Technology. She has been involved in leading and monitoring comprehensive projects when worked for a top new energy company before. She is certified in PMP, IPD, IATF16949, and ACP. Let's break down the key players: □□ Cell Manufacturers: The foundation. They hold the core battery technology and production capacity, commanding the strongest bargaining power in the chain. In recent years, energy challenges such as grid congestion and imbalances have emerged from conventional electric. er a large community of global clean energy transition experts around the world 1. Creating a wider ecosystem of services and software applications is essential for system integrators to stay ahead as "certain parts of the value chain will increasingly become commoditised", acco balance supply and demand. As end-customers benefit from less.
