

# Energy storage and frequency regulation of the Vaduz photovoltaic power station

## Overview

---

Eastern Interconnection (EI) and Texas Interconnection (ERCOT) power grid models, this paper investigates the capabilities of using energy storage to improve frequency response under high PV penetration. How can power systems with high penetration of re systems be effectively allocated?

To circumvent this situation, power systems with high penetration of RE systems must be effectively allocated with efficient, clean, and flexible resources. What is the power and capacity of Es peaking. Abstract— Frequency stability of power systems becomes more vulnerable with the increase of solar photovoltaic (PV). Energy storage provides an option to mitigate the impact of high PV penetration. This article breaks down construc located in Liechtenstein's capital, has reached 65% completion as of Q3 2024.
