Overview

We believe solar + battery energy storage is the best way to peak shave. Other methods – diesel generators, manually turning off equipment, etc. – all present significant downsides. In an era of rising electricity costs, unpredictable peak demand charges, and growing pressure for energy independence, peak shaving energy storage is no longer. Peak shaving, or load shedding, is a strategy for eliminating demand spikes by reducing electricity consumption through battery energy storage systems or other means. Peak shaving enables peak savings. What Are Demand Charges?

Demand charges are expensive. By storing energy during off-peak periods and releasing it during peak periods, energy storage systems can help to reduce peak demand and alleviate strain on the grid.

How Does Peak Shaving Work? Benefits of Peak Shaving Intelligent Battery Energy Storage Systems Peak shaving is the most effective way to manage utility costs for customers with demand charges, but it can also mitigate consumption charges, and offer benefits to other stakeholders, as well. For example, self-consumption of embedded renewables can significantly reduce electricity bills.
