

Energy transition ottawa

Overview

Fully fund and execute the city of Ottawa's Energy Evolution Transition Strategy, Ottawa's primary strategy to fight climate change and achieve our goal of net-zero greenhouse gas emissions in Ottawa by 2050. Prioritise 15-minute, affordable, sustainable and walkable neighbourhoods. The preparation of this strategy was carried out with assistance from the Green Municipal Fund, a Fund financed by the Government of Canada and administered by the Federation of Canadian Municipalities, and the Province of Ontario's Municipal Energy Plan Program. Without these essential upgrades, we risk compromising the stability of our grid. Tackling the energy transition presents unique challenges as well as opportunities for growth and innovation, and Hydro Ottawa is seizing them with unwavering. The purpose of a Community Energy Plan (CEP) is to support the transition to a low carbon future. If Canada gets it right, a substantially bigger and sustainable grid would serve as a springboard for the new energy economy.
