## Overview

---

A flow battery is a rechargeable fuel cell in which an electrolyte containing one or more dissolved electroactive elements flows through an electrochemical cell that reversibly converts chemical energy to electrical energy. Electroactive elements are "elements in solution that can take part in an electrode reaction or that can be adsorbed on the electrode." Electrolyte is stored externally, general. Overview

A flow battery, or redox flow battery (after ), is a type of where A. The (Zn-Br<sub>2</sub>) was the original flow battery. John Doyle file patent on September 29, 1879. Zn-Br<sub>2</sub> batteries have relatively high specific energy, and were demonstrated in electric car. Redox flow batteries, and to a lesser extent hybrid flow batteries, have the advantages of:

- Independent scaling of energy (tanks) and power (stack), which allows for a cost/weight.

The cell uses redox-active species in fluid (liquid or gas) media. Redox flow batteries are rechargeable ( ) cells. Because they employ rather than. The hybrid flow battery (HFB) uses one or more electroactive components deposited as a solid layer. The major disadvantage is that this reduces decoupled energy and power. The cell contains one battery electrode a.
