

Flow solar container battery capacity and power

Overview

The UET flow battery is the size of a shipping container and has 600kW power and 2. A flow battery consists of two tanks filled with chemicals in different oxidation states that react through a membrane. The large capacity can be used for load balancing on grids and for storing energy from. Flow batteries are thus the focus of strong commercial development, spurred on by the United States and the European Union: the goal is to increase their efficiency by continually lowering their costs, which are already falling sharply.
