

How many volts does a 590 watt photovoltaic panel have

Overview

To be more accurate, a typical open circuit voltage of a solar cell is 0.58 volts (at 77°F or 25°C). All the PV cells in all solar panels have the same 0. This is the maximum rated voltage under direct sunlight if the circuit is open (no current running through the wires). It is a lab-produced value that has little value in the field.
