

# How many volts does a 705 solar panel have

## Overview

---

To be more accurate, a typical open circuit voltage of a solar cell is 0.58 volts (at 77°F or 25°C). All the PV cells in all solar panels have the same 0.58V. This is the maximum rated voltage under direct sunlight if the circuit is open (no current running through the wires). Example: A nominal 12V voltage solar panel has an open circuit voltage of 18V. Here's what you need to know about voltage for solar panels: Open Circuit Voltage (Voc): This is the maximum voltage your panel can produce, usually measured on a bright, cold morning. It is a lab-produced value that has little value in the field. Here's a breakdown: Standard Voltage: Most residential solar panels produce between 30 to 40 volts under standard test conditions (STC).
