

How to calculate the price of a single photovoltaic panel

Overview

Our solar price estimator helps you calculate a personalized cost estimate based on your energy needs, location, and system size. Most homeowners spend between \$12,600 and \$33,376 to install a complete residential solar system in 2026, with the national average at \$19,873 before incentives. Your actual cost depends on your home's energy needs, roof characteristics, location and other factors, all of which we'll break down in. How much does a solar panel cost?

Today's premium monocrystalline solar panels typically cost between 30 and 50 cents per Watt, putting the price of a single 400-watt solar panel between \$120 to \$200, depending on how you buy it. Less efficient polycrystalline panels are typically cheaper at \$0.25. Solar panel costs range from \$16,600 to \$20,500 for the average 6. Department of. In this guide, we'll break down average solar costs per square foot in 2025, show how they compare by home size, explain why this metric has limits, and give you expert tips to reduce your price. This article will break down each element that contributes to that cost, so you know exactly what you're paying for. Each type varies in terms of.
