

# How to power solar photovoltaic panels

## Overview

---

This comprehensive guide will walk you through everything you need to know about connecting solar panels to house electricity, from understanding different system types to following proper installation procedures. At a high level, solar panels are made up of solar cells, which absorb sunlight. They use this sunlight to create direct current (DC) electricity through a process called "the photovoltaic effect. " Because most appliances don't use DC electricity, devices called inverters then convert it to. Grid-tied systems dominate 2025 residential solar: With 90% of installations being grid-tied, these systems offer the best ROI at \$2. 50 per watt, featuring 6-10 year payback periods and seamless utility integration through net metering agreements. Let's get into further details.
