

# How to quickly cool down solar inverters

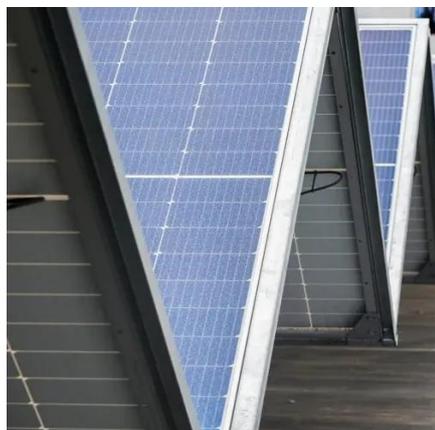

## Overview

---

Here are several tips for efficiently cooling a solar inverter: The solar inverter generates heat, so it needs proper ventilation. Ensure the inverter is in a well-ventilated area and keep it out of direct sunlight. As a solar technician, I want to show you the simple checks and fixes I use every day to keep inverters cool and running at peak performance. The Golden Rule: Get It Out of the Sun This is the number one mistake I see. An inverter is a powerful piece of electronics, not a garden ornament.
