

# Hydraulic system accumulator installation location

## Overview

---

The accumulator in the system is typically positioned near the pump as a best practice. In the end, this will help ensure that your accumulator works as it should and does not have to be replaced prematurely. It stores potential energy through the compression of a dry inert gas (typically nitrogen) in a container open to a relatively incompressible fluid (typically hydraulic oil). Ensure that the surface is sturdy and capable of supporting the weight of the accumulator. In addition, HYDAC suggests a thorough inspection, including a. Most members of the FPDA have on-staff professionals who can assist with design and installation.
