

# Installing solar power generation in the cemetery

## Overview

---

The Spanish city of Valencia plans to use the graveyards as solar power plants. The project has been named RIP (Requiem in Power). It involves installing 7,000 photovoltaic panels over the graves and other structures at public cemeteries in Valencia, resulting in a total. Put together, the cemeteries within city limits will generate 440,000 kW of electricity every year. This project, aptly named “Requiem in Power” (RIP), is set to transform three cemeteries – Grau, Campanar, and Benimàmet – into the largest urban. The city of Valencia, Spain, just launched an exciting project to turn its cemeteries into solar energy powerhouses. It's an innovative way to generate clean power while respecting the original purpose of these solemn spaces, according to Interesting Engineering. The project, cheekily dubbed. Whether it's investigating the financials of Elon Musk's pro-Trump PAC or producing our latest documentary, 'The A Word', which shines a light on the American women fighting for reproductive rights, we know how important it is to parse out the facts from the messaging.

## Installing solar power generation in the cemetery
