

# Instructions for use of high-temperature type lead-acid battery cabinet

## Overview

---

While every precaution has been taken to ensure the accuracy and completeness of this document, Vertiv assumes no responsibility and disclaims all liability for damages result from use of this information or for any errors or omissions. On behalf of everyone at Eaton, we thank you for partnering with us, for trusting us to maintain your business continuity and for preventing downtime at your facility. Our suite of backup power, power distribution and power management products are designed to protect you from a host of threats. Acid is corrosive - wear protective clothing, rubber gloves and goggles when handling batteries and electrolyte. Do not allow metal objects to rest on the battery or all across the terminals. Do not smoke or permit open flames near. Lead-acid battery is a type of secondary battery which uses a positive electrode of brown lead oxide (sometimes called lead peroxide), a negative electrode of metallic lead and an electrolyte of sulfuric acid (in either liquid or gel form). They're used in everything from cars to backup power systems. The ideal operating temperature range for lead - acid batteries is between 20°C and 25°C (68°F - 77°F). If there are any questions concerning this manual or any of the installation or maintenance procedures and/or intenance should always be performed with heavily insulated tools. It is also recommended to wear rubber gloves, boots, .

## Instructions for use of high-temperature type lead-acid battery cabinet

### [What is the temperature range for a battery cabinet to work properly](#)

In this blog, I'll break down the temperature requirements for different types of batteries and how our battery cabinets can help maintain those optimal conditions. First off, let's talk about ...
