

Introduction to Industrial Energy Storage Vehicle

Overview

An Industrial Energy Storage System (IESS) is a large-scale technology that stores energy for later use in factories, manufacturing plants, data centers, and utility grids. These systems capture excess power during low-demand periods and release it when energy demand is high. This report is available at no cost from the National Renewable Energy Laboratory (NREL) at www.nrel.gov, Martin Springer, Hope Wikoff, Karlynn Cory, David Garfield, Mark Ruth, and Samantha Bench Reese. By doing so, they help. The goal of the DOE Energy Storage Program is to develop advanced energy storage technologies and systems in collaboration with industry, academia, and government institutions that will increase the reliability, performance, and sustainability of electricity generation and transmission in the.
