

Introduction to Solar Refrigeration System

Overview

Solar refrigeration is a cooling process that uses solar energy as the main source of power instead of electricity or fuel. It converts sunlight into useful energy through solar collectors or photovoltaic panels to operate a refrigeration or air-conditioning system. This technology helps save. That's precisely what solar absorption refrigeration systems bring to the table, providing an alternative to traditional refrigeration methods. Today, the expanding interest and growing market for refrigeration. [2] Developing the world to help mitigate climate.
