Is it safe to install photovoltaic panels on the roof of a residential building

Overview

Let's clear the air — the overwhelming consensus among scientists and engineers is that solar panels are generally safe. While myths around solar panel radiation risk circulate online, there is no evidence proving that rooftop solar systems cause harm to people living underneath. This article addresses the most common concerns and provides evidence-based information on the safety and benefits of solar. The answer here is almost always yes; however, the following safety considerations should be reviewed to determine the condition of your roof before moving forward. Do your research before hiring a solar installation company. Solar panels offer a compelling mix of environmental benefits and financial incentives. Concerns about leaks, voided warranties, or long-term structural damage are common. Since the roof is one of the most critical parts of the home, it's natural to want reassurance. When installing photovoltaic panels on one- and two-family homes, it's important to understand the requirements for access pathways and the requirements for setback from the ridge, which only apply to roofs with a slope greater than a 2-in-12 pitch.
