

Is photovoltaic plus energy storage cost-effective

Overview

In addition to maximizing the value of solar, pairing solar PV with a battery storage system can also reduce energy costs (storing electricity when it is cheapest and discharging when it is most expensive). Battery storage maximizes. To determine the cost of a solar-plus-storage system for this study, the researchers used a 100 megawatt (MW) PV system combined with a 60 MW lithium-ion battery that had 4 hours of storage (240 megawatt-hours). A 100 MW PV system is large, or utility-scale, and would be mounted on the ground. NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. Co-Located?

AC = alternating current, DC = direct.
