

# Is the photovoltaic energy storage power supply directly supplied by the manufacturer

## Overview

---

While solar panels are crucial in the conversion of solar energy into usable electricity, their functionality does not directly include energy storage, which is fundamentally provided by batteries or other forms of energy storage technology. Sometimes two is better than one. Coupling solar energy and storage technologies is one such case. The reason: Solar energy is not always produced at the time. This report is available at no cost from the National Renewable Energy Laboratory (NREL) at [www.nrel.gov](http://www.nrel.gov). National Renewable Energy Laboratory, Sandia National Laboratory, SunSpec Alliance, and the SunShot National Laboratory Multiyear Partnership (SuNLaMP) PV O&M Best Practices. A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy. These photons contain varying amounts of energy. EL-1) Are solar PV systems, including photovoltaic modules, panels and arrays, and their associated components, considered to be electrical equipment under the State Electrical Code?

Answer: Yes. When businesses need mobile energy storage power supplies, working directly with manufacturers like EK SOLAR eliminates middlemen markups while ensuring technical compliance. A single PV device is known as a cell, which typically produces about 1-2 watts of power.
