

# Liquid flow battery for small base station equipment in Paris

## Overview

---

This technology strategy assessment on flow batteries, released as part of the Long-Duration Storage Shot, contains the findings from the Storage Innovations (SI) 2030 strategic initiative. Conventional batteries like lithium-ion have limited scalability for stationary applications and present safety risks and environmental concerns due to the scarcity of the raw material used and potential fire hazards. Iron-flow batteries address these challenges by combining the inherent advantages. With the increase in variable renewable energy (solar and wind power) penetration globally, long-duration energy storage (LDES) solutions such as flow battery technology will be essential in meeting the decarbonization goals, grid efficiency, and reliability needs.
