

# Microgrid Peak

## Overview

---

Peak load is a particularly sensitive issue for microgrids as it happens occasionally for a small percentage of the time in a day. Authorized by Section 40101(d) of the Bipartisan Infrastructure Law (BIL), the Grid Resilience State and Tribal Formula Grants program is designed to strengthen and modernize America's power grid against wildfires, extreme weather, and other natural disasters that are exacerbated by the climate. This work was authored by the National Renewable Energy Laboratory (NREL) for the U. Department of Energy (DOE), operated under Contract No. Funding provided by the DOE's Communities LEAP (Local Energy Action Program) Pilot. To maintain grid stability and improve power quality, the microgrids must.

## Microgrid Peak

The incorporation of energy storage systems, particularly vanadium redox flow batteries (VRFBs), is critically significant for the operation of microgrids, facilitating effective peak shaving and load balancing.

## Microgrid Overview

The size and therefore cost of the generation and storage is typically based on the peak load of the community that the microgrid is serving, which is the highest level of power required at any point in the year.
