

Microgrid and integrated smart energy

Overview

Microgrids serve as an effective platform for integrating distributed energy resources (DERs) and achieving optimal performance in reduced costs and emissions while bolstering the resilience of the nation's electricity system. The value of microgrids is further enhanced with issuance of FERC Order. This paper proposes an integrated framework to improve microgrid energy management through the integration of renewable energy sources, electric vehicles, and adaptive demand response strategies. An optimization strategy based on machine learning employs a support vector machine for forecasting.
