

# Ordinary wires connected to photovoltaic panels

## Overview

---

Solar Wires refer to single conductors that interconnect components of a photovoltaic system. They typically connect four primary components: the solar panel, inverter, charge controller, and batteries. Without proper wiring, energy can be lost, systems may fail, or even catch fire. In this post, you'll learn what solar wires and cables do, why they matter, how they differ, and how to choose the.

**Solar Panels:** They are considered the backbone of a solar system, made up of different PV cells connected in parallel or series. Get it wrong, and you could be looking at wasted power, costly inefficiencies, or even safety. Connecting wires to solar panels is a critical process that allows electricity generated by the panels to be delivered to inverters, batteries, and electrical systems.
