

# Ottawa solar container energy storage system

## Overview

---

Although energy storage comes in different shapes and sizes, the lithium-ion Battery Energy Storage System (“BESS”) is the fastest emerging technology in North America and is planned to be deployed in the City of Ottawa with the Ottawa BESS 2 Project. In 2025, the City of Ottawa established official plan and zoning provisions for battery energy storage uses in accordance with new Official Plan policy. BESS is an emerging technology using batteries and associated equipment to store excess energy from the electrical grid, which can then discharge. On May 9, 2024, the IESO announced that ten proposed BESS projects were selected, totaling 1,784 megawatts (MW) of energy storage, including two to be located in rural west Ottawa. During a power outage or at night : Your battery backup system automatically kicks in, supplying power to essential devices such as lighting, refrigerators. Battery storage systems are a game-changer in the shift towards cleaner energy sources like wind and solar power. Batteries can also help manage electricity costs by storing power.

## Ottawa solar container energy storage system
