Overview

This paper is the first to combine the advantages of the dynamic decision-making of the DQN (Deep Q-Network) algorithm and the time series prediction of the LSTM (Long Short-Term Memory) model to study the automatic switching strategy of the grid-connected/off-grid mode of the. This paper is the first to combine the advantages of the dynamic decision-making of the DQN (Deep Q-Network) algorithm and the time series prediction of the LSTM (Long Short-Term Memory) model to study the automatic switching strategy of the grid-connected/off-grid mode of the. To achieve smooth switching between grid-connected and islanded operation of microgrid, a smooth switching control strategy based on the consistency theory for multi-machine parallel PV energy storage VSG system is proposed. This distributed control strategy can be synchronized without relying on. With the widespread application of renewable energy, photovoltaic (PV) storage and charging (SC) integrated stations are important in providing a stable power supply and optimizing energy management. Due to the disruptive impacts arising during the transition between grid-connected and islanded modes in bidirectional energy storage.
