

Photovoltaic foundation bracket cutting

Overview

This highly specialized machine transforms coils of metal into precision-engineered profiles used to secure and mount solar panels. These profiles can range from simple brackets to complex frames, each designed to withstand environmental challenges like wind, rain, and UV exposure. Common A PV bracket system is diagrammatically illustrated in Fig. It mainly comprises the supporting framework above the earth surface and foundation. The installation selection of photovoltaic ground brackets is mainly based on factors such as the fixing method of the bracket, terrain requirements, material selection, and the weather resistance, strength, and stiffness of the bracket. Using a series. he solar panel to tilt.

Photovoltaic bracket block cutting method

Under three typical working conditions, the maximum stress of the PV bracket was 103.93 MPa, and the safety factor was 2.98, which met the strength requirements; the hinge joint of 2 rows
