## Overview

---

Inverter input voltage usually depends on inverter power, for small power of some 100 the voltage is 12 to 48 V. Grid connected inverters can be connected in parallel when higher powers are. Both the maximum voltage value and operating voltage range of an inverter are two main parameters that should be taken into account when stringing the inverter and PV array. At. vesting System is a state-of-the-art system designed to harvest the maximum possible energy from photovoltaic (PV) modules in utility-interactive (grid-tied) PV systems. A SolarEdge PV system, shown in Figure 1 below, consists of three main elements: PV modules, power optimizers (DC to DC. Inverters belong to a large group of static converters, which include many of today's devices able to "convert" electrical parameters in input, such as voltage and frequency, so as to produce an output that is compatible with the requirements of the load.
