

# Photovoltaic panels are afraid of bumps

## Overview

---

Bubbles in solar panels, often referred to as delamination, can occur due to a variety of reasons, including manufacturing defects, poor installation practices, or environmental factors. Here are some common causes of bubbles in solar panels and preventive measures. The long-term stability of photovoltaic modules is key to the continuous production of electricity from a photovoltaic system. Preventive Measure: Source solar. PV modules are durable, can withstand a hurricane and serve their owners diligently for more than 25 years. Looks like we can hardly have any problems with solar panels, doesn't it?

Far from it! To keep solar cells safe, manufacturers protect them with a layer of tempered glass and the plastic back. Solar panel failures have bigger implications than just wear and tear on your system. These weaknesses are significant risks to your reputation, personal.
