

Should batteries or solar panels be used first

Overview

Budget is limited and you can gain more by first installing panels (which generate electricity) and adding a battery later. Local incentives for batteries are weak or uncertain in your area. But before buying one, you should know both the good and the bad sides. There are some things to consider when it comes to retrofitting.

Understanding Energy Needs: Assess your daily energy consumption to determine if you require battery storage for nighttime or cloudy day energy access.

Grid Connection Considerations: If connected to the grid, you might not need batteries as excess energy can be fed back, allowing you to draw power. That's why residential solar power combined with battery storage (once an esoteric niche industry) is rapidly becoming a mainstream disaster-preparedness choice, according to more than a dozen installers, manufacturers, and industry experts we interviewed. But the solar battery market is rapidly. The right choice depends on your state's utility policies, incentives, and your personal goals.

Should batteries or solar panels be used first

[Can I Use Solar Panels Without Battery Storage? \(And Is It Worth It?\)](#)
