

Solar air conditioning in Chilean building

Overview

This model will be developed using the dynamic simulation program TRNSYS, considering three specific areas of work: determination of the thermal load for a building survey in the central region of our country; implementation of the computational model for the absorption refrigeration. This model will be developed using the dynamic simulation program TRNSYS, considering three specific areas of work: determination of the thermal load for a building survey in the central region of our country; implementation of the computational model for the absorption refrigeration. Within the heat assisted technologies, there are so called absorption cooling systems, which base their operation in the production of cold supplying hot water from solar collectors. The main objective of this work is to develop a computational model that allows the simulation of an hourly basis. Chile is adopting district energy systems to meet heating and cooling demands, reduce pollution and move toward its 2050 decarbonization goals. Chile has traditionally used inefficient, polluting, individual systems, like biomass space heaters and fossil fuels, to meet heating and cooling needs. So we suggest their use ACDC on-grid solar air conditioner. The ACDC on-grid solar air conditioner can work with solar panels and grid electricity.

Solar air conditioning in Chilean building

Buyer's Guide: Best Solar-Powered AC Units of 2026

Discover the best solar-powered AC units to save on energy bills while staying cool and reducing your carbon footprint!

[ACDC on grid solar air conditioner install in Chile](#)

As the village currently lacks access to the grid, the King requested the design of a 1MW solar panel system paired with a 1.8MWh lithium battery storage system to power the entire village.

[A review on solar-powered cooling and air-conditioning systems for](#)

This paper presents and discusses a general overview of solar cooling and air-conditioning systems (SCACSs) used for building applications. The popular SCACSs driven by solar ...

[109: Simulation and optimization of a solar driven air conditioning](#)

Since most, of the air conditioning demand in Chile occurs in central and northern regions of the country, consumption is associated with a high availability of irradiation, which offers an optimal scenario for ...

[Solar Air Conditioner: The Ultimate Buying Guide \[2025\]](#)

Looking for an energy-efficient way to cool your home? Our guide to choosing the best solar air conditioner for you has everything you need to know.

[Impact Assessment of Implementing Several Retrofitting Strategies on](#)

In the retrofitting strategies, windows play an essential role. Thermal transmittance and solar gains through windows significantly impact a building's energy balance and, therefore, the ...

[Solar energy for air conditioning of an office building in a case study](#)

Thus, this paper presents the detailed techno-economic feasibility analysis and environmental utility of a solar PV powered air conditioner system for an office building. The design, ...

[Simulation and optimization of a solar](#)

driven air conditioning system

In this study, the effect of changing the thermal storage capacities of hot and cold storage tanks and the solar collector area on the performance of the absorption air conditioning cycle was

District Energy: Sustainable solution for air conditioning in Chile

As Chile moves forward, these district energy initiatives will have significant pollution reduction and decarbonization impacts. The projects will help Chile reach its climate targets and offer attractive ...
