

Solar controller light is on but no electricity is generated

Overview

First, check your power source and connections to ensure the controller is supplied with electricity. If everything appears fine and the issue persists, it is advisable to contact the manufacturer or a professional for technical help to avoid causing further damage. According to the National Renewable Energy Laboratory (NREL), solar systems typically operate with over 95% reliability, meaning issues are usually preventable or easily diagnosed. This guide explains the most common reasons why your solar panels may not be generating power, and how to troubleshoot. Solar panels are designed to last for years to come, and so are other solar components, including inverters. Like any other technology, solar systems can also malfunction or underperform in certain conditions or due to various issues.
