

Solar inverter crisis

Overview

Gilligan told PV Tech Premium that PV inverter revenue is predicted to fall 20% in 2024. The inverter market is experiencing “growing pains” as falling prices, shifting demand and technological product changes cause problems for the sector's major. PJM found that it was not able to fully cover its reserve margin in a recent capacity auction, prompting outgoing FERC Chairman, Mark Christie, to indicate that the reliability crisis is here. With increasing electricity demand and growing production from wind and solar power, FERC has approved. The fears center around solar panel inverters, a piece of technology that turns solar panels' electricity into current that flows into the grid. Because the inverters are hooked up to the internet, security experts. North American Electric Reliability Corporation issued a Level 3 alert to transmission owners, planners and generator operators, urging immediate attention to how inverter-based resources respond to grid disturbances. New research released March 27 by Forescout Research-Vedere Labs found 46 new vulnerabilities across three of the world's 10 leading solar inverter vendors, flaws that could impact power grid stability, utility operations, and consumer data privacy. Net-metering changes in the biggest solar state of California resulted in the residential market's lowest quarter in nearly three years.

Solar inverter crisis

The Grid Reliability Crisis Is Here

Solar and wind generators are not able to respond to voltage and frequency disturbances on the grid, as was experienced by the blackout in Spain and Portugal in May.

Inverter manufacturers facing 'growing pains'

In recent weeks, three major western inverter manufacturers - SMA Solar, Enphase and SolarEdge - have reported challenging financial results and job cuts.

[Huawei's solar tech sparks fears of Europe's next dependency crisis](#)

The fears center around solar panel inverters, a piece of technology that turns solar panels' electricity into current that flows into the grid. China is a dominant supplier of these inverters, ...

[Major residential inverter manufacturers weather industry headwinds](#)

The recent residential solar industry downturn in the United States and Europe has required some inverter manufacturers to close down operations and cut jobs.

The Great Solar Inverter Crisis of 2025

Explore The Great Solar Inverter Crisis of 2025, as aging infrastructure threatens 227GW of solar capacity globally.

[Level 3 alert for solar inverters from nation's power grid reliability](#)

North American Electric Reliability Corporation issued a Level 3 alert to transmission owners, planners and generator operators, urging immediate attention to how inverter-based ...

Spring 2025 Solar Industry Update

o As the energy crisis fueled by Russia's invasion of Ukraine has subsided, demand for residential solar systems in the EU has declined and several residential solar incentive schemes ...

[46 new bugs in solar power inverters raise](#)

concerns over power grid

New research released March 27 by Forescout Research-Vedere Labs found 46 new vulnerabilities across three of the world's 10 leading solar inverter vendors, flaws that could impact power grid ...

Chinese-made solar inverters could be weaponized against U.S., ...

Energy companies, cybersecurity experts and lawmakers warn that U.S. dependence on Chinese inverters that can be manipulated remotely is a mounting security threat.

Acute Shortage of Solar Equipment Poses Risks to the Power ...

To address the panel shortage, the Biden Administration is pursuing a concerted strategy to build domestic solar manufacturing capacity and reliable, domestic supply chains. Several solar ...
