## Overview

---

Frequent faults – inverter error messages, tripped breakers, or flickering supply may mean water has reached internal components. Any one of these warning signs should be treated seriously. However, like any electrical equipment, solar inverters are susceptible to various risks, one of which is water damage. Generally, inverters are waterproof. My inverter got water! How should rainy season prevent this kind of situation?

In some places the rainy season is long and the air is. Common IP ratings for water resistance in solar generators include IPX4, IPX5, and IPX6. An IPX4 rating signifies that the generator can withstand water splashes from any direction, while IPX5 indicates protection against water jets from a nozzle. Even though your inverter may be. In order to make sure that the inverter is protected from water damage, manufacturers often use waterproof casings and seals that prevent moisture from entering the solar inverter unit.
