## Overview

---

Texas-based Janta Power company is developing three-dimensional solar towers that generate roughly 50 percent more energy than standard flat-panel systems. This tower-like design maximizes the use of space, fitting a far greater number of panels into a much smaller footprint. 5 million in a round of seed funding to continue the deployment of its pivoting solar power towers. Currently, most solar farms consist of flat. A solar power tower, also known as 'central tower' power plant or ' heliostat ' power plant, is a type of solar furnace using a tower to receive focused sunlight. A prototype of a 3-D solar tower is seen at Janta Power's Dallas office that is interconnected to the Texas grid.
