

# Solar power generation directly connected to the mains

## Overview

---

In an in-front-of-the-meter system, the power from the solar system is interconnected with the electric grid directly, through a three-phase power substation. This is accomplished through a grid-tie connection. Solar interconnection is the cornerstone of modern renewable energy. There are two basic approaches to connecting a grid-tied solar panel system, as shown in the wiring diagrams below. 50 per watt, featuring 6-10 year payback periods and seamless utility integration through net metering agreements. Adhering to regulatory frameworks ensures safety and efficiency, while the inverter's.
