

Solar power system installation free of charge

Overview

Solar panels aren't free, but they do generate free electricity and significant savings. Purchasing your system with cash comes with a high upfront cost: A roughly 12 kilowatt (kW) system on EnergySage (the average quoted system size) costs about \$30,505 before incentives. These offers often refer to solar leases or power purchase agreements (PPAs), financing options where a solar company installs panels on your property without requiring a down payment. While this might sound enticing, there is a lot more to consider before signing a lease. The ITC — also known as the Federal Solar Tax Credit — is a popular tax rebate program offered by the US Federal Government for homeowners looking to switch to clean, renewable solar power. However, the federal government does not offer any programs for free home solar panel installations nor does the government require companies to grant. Let's get this out of the way early — “free solar panels” are not really free. There is no such thing as free solar panels, and there is no such thing as a no-cost solar program.
