

# Space Station Photovoltaic Panel Replacement

## Overview

---

Friday, NASA astronauts on the ISS completed a six-hour spacewalk to install and deploy one of the two new solar panels brought up on the most recent commercial cargo mission. While anchored to a foot restraint on the end of the Orbiter Boom Sensor System, astronaut Scott Parazynski assesses his repair work as the solar array is fully deployed during the STS-120 mission's fourth spacewalk on Nov. 3, 2007 while Space Shuttle Discovery is docked with the International. The electrical system of the International Space Station is a critical part of the International Space Station (ISS) as it allows the operation of essential life-support systems, safe operation of the station, operation of science equipment, as well as improving crew comfort. more Sound. NASA's Space Technology Mission Directorate (STMD) develops technologies through a community of entrepreneurs, researchers, and innovators to solve the nation's toughest challenges and enable future NASA and commercial missions to the Moon, Mars, and beyond. Safety procedures must be adhered to meticulously, 2. Astronauts undergo specialized training for repairs, 3. The six-hour spacewalk was conducted by NASA astronauts.

## Space Station Photovoltaic Panel Replacement

OverviewStation to shuttle power transfer systemSolar array wingBatteriesPower management and distribution

From 2007 the Station-to-Shuttle Power Transfer System (SSPTS; pronounced spits) allowed a docked Space Shuttle to make use of power provided by the International Space Station's solar arrays. Use of this system reduced usage of a shuttle's on-board power-generating fuel cells, allowing it to stay docked to the space station for an additional four days. SSPTS was a shuttle upgrade that replaced the Assembly Power Converter Unit (APCU) with a new d...

## [Crew-6 astronauts install the first of two new solar panels on the ISS](#)

Friday, NASA astronauts on the ISS completed a six-hour spacewalk to install and deploy one of the

two new solar panels brought up on the most recent commercial cargo mission.
