

# Summary of the paper on wind power generation principle

## Overview

---

The principle of wind power generation involves taking the kinetic energy of the wind to drive the rotation of wind turbine blades, which is then accelerated by a gearbox to enable a generator to produce electricity. Abstract - Nowadays wind kinetic energy is a promising source of renewable energy in many parts of the world. Most of the countries in the world wants to exploit wind energy in maximum possible way to meet their energy demands. Various wind turbine. Harvesting wind power isn't exactly a new idea - sailing ships, wind-mills, wind-pumps 1st Wind Energy Systems - Ancient Civilization in the Near East / Persia - Vertical-Axis Wind-Mill: sails connected to a vertical shaft connected to a grinding stone for milling Wind in the Middle Ages - P t Mill. r of wind and convert it into usable electricity. ## UNIT II

Wind power generation varies depending on how wind fluctuates. However, the variations in output are smoothed when many wind power plants are aggregated over an area in a power system.

## How a Wind Turbine Works

Wind turbines work on a simple principle: instead of using electricity to make wind--like a fan-- wind turbines use wind to make electricity. Wind turns the propeller-like blades of a turbine around a rotor, ...
