

Whether the generator is installed inside or outside the substation

Overview

Here are some key considerations for how to decide whether to place generators inside a building vs outside in enclosures with sub-base fuel tanks. Choose a site close to the electric service and fuel supply lines (natural gas, propane, or diesel). The difficulties are understandable: Generators. Knowing the differences between indoor and outdoor generators assures your reputation — not to mention employees' and customers' safety — are prioritized, always. Placing and positioning it correctly will make sure that you and anyone else nearby stay safe, and it will also keep it running better, longer. Poor or botched placement can lead to damage, an accidental fire, or injury. Once a generator is sized and the fuel type is determined, it is time to decide the right location for the generator.

Whether the generator is installed inside or outside the substation

2023 NEC Study Guide for Generator Installations
