

Which ev use blade batteries

Overview

Chongqing, China — On April 7, 2021, BYD, a leading global EV maker, officially announced that all of its pure electric vehicles will now come with the brand's ultra-safe Blade Batteries, with nail penetration testing fully adopted as a brand standard. This new iteration of its acclaimed Blade Battery is being hailed as a turning point in sustainable. The BYD blade battery is a lithium iron phosphate (LFP) battery for electric vehicles, designed and manufactured by FinDreams Battery, a subsidiary of Chinese manufacturing company BYD. [1][2][3] The blade battery was officially launched by BYD in 2020. BYD claims that compared with ternary lithium. In this buyer's guide, we will explore the key features to consider when choosing an EV with a blade battery, how to evaluate the total cost of ownership, and top EV models that feature blade batteries. In the global race toward electrification, China has surged ahead as the undisputed leader of the electric vehicle (EV) revolution. Set to hit the market in August 2024, this revolutionary battery technology represents a quantum leap over its predecessors and could fundamentally transform how we think about EV.

[BYD Blade 2.0: The Battery Changing the EV Landscape in 2025](#)

The BYD Blade Battery 2.0 features a significantly improved energy density of 190-210 Wh/kg. It supports 8C ultra-fast charging, allowing EVs to recharge from 10% to 80% in just 10 ...

BYD Blade battery

BYD claims that, in the nail penetration test, the blade battery emitted no smoke or fire after being penetrated, and its surface temperature reached only 30 to 60 °C (86 to 140 °F). The blade battery also passed other extreme test conditions, such as being crushed and bent, being heated in a furnace to 300 °C (572 °F), and being overcharged by

260%. None of these resulted in a fire or explosion. BYD claims that "EVs equipped with the blade battery would be far less susceptible to catching fire - ev...
