

# Will the big wind turbine turn without wind

## Overview

---

Wind turbines only require a small amount of wind for the blades to turn and electricity to be generated, and they can gather enough momentum to continue spinning even after the wind stops, per the Office of Energy Efficiency & Renewable Energy. Have you ever been driving on a windless day and seen the windmills turning?

How can that be?

The fact is, if they are turning, there must have been some wind blowing. It could be just slightly windy; it only takes a slight breeze of to turn a turbine. Once a turbine is going, it can take hours to. Hybrid wind turbines like SmartGen's can generate power even without wind. Bladeless wind turbines are an innovative, efficient and less invasive solution. Energy storage using compressed air ensures a stable power supply. The shaft connects to a generator, producing electricity. Transformers increase voltage for transmission.
