

Wind power generation ranks third in the country

Overview

India became the world's third-largest producer of electricity from wind and solar energy in 2024, overtaking Germany, according to a new report published on Tuesday. Together, China and the United States generated 50.6% of the world's wind power in 2021. A full 9% of the country's electricity came. The worldwide total cumulative installed electricity generation capacity from wind power has increased rapidly since the start of the third millennium, and as of the end of 2023, it amounts to over 1000 GW. 67 billion kilowatthours and the lowest value was in Afghanistan: 0 billion kilowatthours. In India, clean sources accounted for 22 per cent of the electricity generation. While Texas is known for its oil derricks and natural gas pumps, wind turbines have become a major part of the state's landscape.

Wind power generation ranks third in the country

Wind electricity generation

Wind electricity generation, billion kilowatthours, 2022: The average for 2022 based on 189 countries was 11.16 billion kilowatthours. The highest value was in China: 762.67 billion kilowatthours and the lowest value was in ...

[Wind Energy by State , February 2026 . Choose Energy](#)

Wind energy generation increased by 2.03% nationally from November 2024 to November 2025. The following table shows the top 10 states that experienced an increase in wind production since last year.

[India Ranks As 3rd-Largest Generator Of Wind, Solar Power: Report](#)

India became the world's third-largest producer of electricity from wind and solar energy in 2024, overtaking Germany, to according to a new report published on Tuesday.

Country Rankings

This dashboard ranks countries/areas to their renewable energy power capacity or electricity generation. The data can be further refined based on region, technology or year of interest.

GRADE A BATTERY

LiFePO4 battery will not burn when overcharged, over discharged, overcurrent or short circuit and can withstand high temperatures without decomposition.

[Leading wind power producing countries 2024, Statista](#)

In 2024, China was the country with the largest energy production from wind, with some ***** terawatt hours.

Wind Power by Country 2023

Learn for yourself about wind power by country by investigating the data in the map and charts.

Share of electricity production from wind, 2025

Share of electricity production from wind, 2025
Measured as a percentage of total electricity produced in the country or region.

Wind power by country

Wind power is used on a commercial basis in more than half of all the countries of the world. [3] Denmark produced 58% of its electricity from wind in 2023, a larger share than any other country.

Wind Power by Country 2026

The United States is the second-largest producer of wind power, and generated 341.40 TWh of wind power in 2021, equal to just over 21% of total global production.

Global Statistics

According to preliminary statistics published today by the World Wind Energy Association, global wind power capacity has now reached 1'173'581 Megawatt - well below the estimates published by ...
