

# Wind power generation time period

## Overview

---

Wind-powered machines used to grind grain and pump water — the windmill and wind pump — were developed in what is now Iran, Afghanistan, and Pakistan by the 9th century. The number of wind pumps and wind turbines declined as rural electrification programs in the 1930s extended power lines to most farms and ranches across the country. But when did people first start to harness the power of the wind?

When was the first wind turbine created?

What did wind energy look like and how has it evolved?

Here we look at the. The history of wind energy can be traced back thousands of years, with the earliest known use of wind power dating back to ancient civilizations who harnessed the wind's energy for tasks such as grinding grain and pumping water. However, it was not until the late 19th century that wind turbines. Last month's Back to Basics article considered the chronological development of modern solar power, and now, we dip into the history of another major renewable energy source - electricity generated by wind.
